

Standard Operating Procedure (SOP)

KG-CAR : Certificate Acknowledgement Receipt Generator

1. Purpose

The purpose of the KG-CAR system is to streamline and digitize the process of collecting, managing, and storing certificate records of newly admitted first-year students. The system helps administrative staff efficiently record certificate submissions, generate acknowledgement receipts, and maintain organized digital records for future reference.

2. Scope

This SOP applies to:

- College administrative staff handling student admissions
- Staff responsible for collecting and verifying student certificates
- Data entry operators managing student records
- Administrative personnel generating reports

The system is used during the admission process for newly joined first-year students.

3. Definitions

- **KG-CAR** — Certificate Acknowledgement Receipt Generator system
- **Acknowledgement Receipt** — PDF document confirming submission of certificates
- **Admin User** — Authorized staff member using the system
- **Edit Version Record** — A log that tracks changes made to student records including who made the change, what was modified, and when the modification occurred

4. Roles and Responsibilities

Administrative Staff

- Collect certificates from students
- Verify submitted documents
- Enter student details into the system
- Update records when necessary

Data Entry Operator

- Input accurate student data
- Ensure certificate status is correctly recorded
- Maintain accuracy when editing records

5. System Requirements

- Computer with college network
- KG-CAR web application
- User login credentials
- Printer (optional for physical receipt printing)

6. Procedure

Step 1 — Login

1. Open the KG-CAR application in the browser.
2. Enter valid admin credentials.
3. Click Login to access the system.
4. After successful login, the system automatically navigates to the **New Entry Page**.

Step 2 — New Student Entry

On the New Entry Page, the staff must enter the following details:

1. Student Name
2. Admission Number
3. Parent Name
4. Personal Email
5. Parent Mobile Number
6. Student Mobile Number
7. Program
8. Department
9. Quota

Based on the selected **Program** and **Quota**, the system dynamically generates the required certificate input fields.

The staff must:

- Verify the physical certificates submitted by the student
- Mark or enter the certificates provided by the student in the generated fields

After entering all required details:

1. Click Create Student Record.
2. The system stores the student data.
3. A confirmation email is automatically sent to the student's registered email address.

Step 3 — Edit Student Page

The Edit Student Page allows staff to modify existing records.

Staff can:

1. Search and open a student record.
2. Make necessary changes to the student details or certificate information.

After making changes, staff have two options:

Save Draft

- Saves changes temporarily
- Record remains editable later

Save Student Data

- Finalizes the record
- Student details become non-editable

The system maintains version tracking with the following details:

- Previous version of the record
- Edited by (user name)
- Date and time of modification
- History of all changes

For every update made, the system automatically sends a notification email to the student's registered email address.

Step 4 — Download Student Page (PDF)

On the Download Student Page:

1. Staff can search for students whose records are fully saved.
2. Select the required student.
3. Click Download PDF.

The system generates a PDF containing complete student details and certificate acknowledgement.

Step 5 — Download Details Page (Excel Export)

On the Download Details Page:

1. Staff can export student records as an Excel file.
2. Data can be filtered based on:
 - Program
 - Department
3. Click Download Excel to export the data.

The system generates a complete dataset based on selected filters for reporting and record maintenance.

7. Data Management

- All student data is stored securely in the system database.
- Edit history is maintained for auditing purposes.
- Regular backups should be maintained.
- Only authorized users can modify records.

8. Error Handling

- If incorrect data is entered, update the student record using edit functionality.
- System automatically tracks corrections in version history.
- Report system errors to the system administrator.
- Maintain manual records temporarily if the system is unavailable.

9. Backup and Maintenance

- Perform periodic database backups
- Monitor edit logs for unusual changes
- Monitor system performance
- Update software when required

10. Benefits of the System

- Reduces manual paperwork
- Improves data accuracy
- Provides accountability through edit tracking
- Faster retrieval of student records
- Easy generation of acknowledgement receipts
- Efficient reporting through Excel export

11. Conclusion

The KG-CAR system enhances the efficiency of administrative operations by digitizing certificate collection and record management. The inclusion of edit version tracking ensures transparency and accountability while maintaining accurate documentation and streamlined reporting during the admission process.
